MISSOURI'S WIND ENERGY INDUSTRY

ACCESS TO RESOURCES: Four of Missouri's neighboring states are included among the top five states for existing wind capacity. Missouri and surrounding states have a combined existing capacity of approximately 47,134 MW—more than 32% of the total U.S. current wind power capacity.

ACCESS TO SAVINGS: Missouri requires electricity suppliers to offer net metering to residents with customer-sited renewable electricity generating systems, with the value of excess generation sent to the grid credited to the customer's next bill.

ACCESS TO THE FUTURE: Missouri's potential capacity is 279,000 MW. Missouri and surrounding states have a combined potential capacity of 2.5 million MW—representing nearly a quarter of the total potential wind capacity for the U.S.²

ACCESS TO EVERYWHERE: Missouri's location and extensive logistics infrastructure — including access to the two largest rivers in the U.S. and all Class 1 railroads — make it simple and efficient to ship energy-related products around the world.

ACCESS TO ADVANTAGE: Missouri's low cost of doing business, including affordable and reliable electricity, positions Missouri as a prime location for manufacturers in the energy sector.

ACCESS TO ASSISTANCE: Our services include assisting with identifying and vetting suitable building/sites, including numerous certified sites.

2,435 MW installed capacity²

THRIVING INDUSTRY: Missouri is home to innovative suppliers for the wind industry:

Missouri Partnership is a public-private economic development organization focused on attracting new jobs and investment to the state and promoting Missouri's business strengths. We work in partnership with Hawthorn Foundation, the Missouri Department of Economic Development, the State of Missouri, and economic development agencies across the state.
